

Lorenz Energy Cycle before and after the toolkit correction
phase medians (W m^{-2}); doubled arrows mark terms that changed

Arrows point in the direction the energy flows; thickness scales with |median|. Unchanged terms carry a single arrow.

Changed terms with no place in the classical diagram (medians over all phases, W m^{-2}): $B\Phi_Z$ 54.26 $\rightarrow$ 6.85 $\cdot B\Phi_E$ 34.12 $\rightarrow$ -1.11 $\cdot R_{G_Z}$ -0.99 $\rightarrow$ 0.20 $\cdot R_{G_E}$ 1.31 $\rightarrow$ 0.17
